

Code Review - Tiutin Andrada

- 1) Replace `::=` with `=`, in order to be in the EBNF form.
- 2) `no=digit{no}` creates an infinite loop, a stop condition is needed
- 3) `expression ::= expression ["+"|" "-] term | term`
 `term ::= term ["*"| "/"] factor | factor`
 `factor ::= "(" expression ")" | identifier` — is not very straightforward, it should be simplify a little bit

Otherwise, everything looks fine. Good job 😊
